New From Paslode® Engineered Lumber Nails

Superior Drive Performance In The Toughest Lumber

(Vernon Hills, IL) – Driving nails into engineered lumber just got easier as Paslode (www.paslode.com) introduces its made-in-the-USA **Engineered Lumber Nails**. These new nails are designed to increase a contractor's productivity and maximize profitability.

The building industry is using more engineered lumber than ever before. But harder materials like LVL, LSL and PSL make it difficult to sink nails flush the first time. Contractors waste time fixing or pulling standing and bent nails. Turning up the pressure on compressors to try and overcome this problem doesn't always work and it means increased fuel costs and more wear and tear on tools and equipment.

"Paslode's mission is to make professional contractors more productive, so they are more profitable," said Steve Golich, Marketing Manager for Paslode. "Our new Engineered Lumber Nails do just that. They are designed for superior drive performance in the hardest LVL, LSL and PSL."

Paslode Engineered Lumber Nails drive flush the first time, maximizing a contractor's profitability by saving labor time and reducing wasted nails. No more fixing or pulling nails that don't drive flush. Plus contractors can run their compressor at a lower pressure, reducing fuel and maintenance costs.

Paslode Engineered Lumber Nails are compatible with all Paslode cordless and pneumatic framing nailers and are a perfect compliment to the Paslode PowerFramer[™] PF350 pneumatic framing nailer, making the tool and nails one of the most powerful, productive fastening systems on the market today.
