New Paslode® Positive Placement® Metal Connector Nailer: A Powerful, Durable, Compact Tool

(VERNON HILLS, IL) – With metal connectors requiring 1-1/2” nails in wide use across the country, Paslode® is introducing the new Positive Placement® Metal Connector Nailer, Model PF150S-PP, designed specifically for 1-1/2” nails. This compact metal connector nailer is lightweight – under 6.4 lbs. – to reduce fatigue on the job site. The new PF150S-PP nailer was designed with the production user in mind, its durability means it can handle everyday use. It also sports a number of features that will make the user more productive.

Its compact design makes it easy to maneuver into tight spaces, and its lightweight is easier on the arm. With Paslode’s unique, patented Positive Placement® probing tip, the PF150S-PP easily and accurately locates the metal connector hole, making this a fast and productive tool. Its high capacity magazine easily accommodates two strips of nails for less reloading and added productivity.

This tool’s strong aluminum housing is designed to withstand tough jobsite conditions. It also features a tool-less adjustable air deflector to deflect air away from the user, and a cushioned grip for comfort. Finally, the nail lock-out mechanism engages when four nails are left in the magazine to signal that reloading is necessary and help prevent premature driver blade wear.

The PF150S-PP is designed to drive Paslode positive placement metal connector nails, which are head marked for easy nail identification by building inspectors. These nails are paper-tape collated, heat treated and come in 1-1/2” x .131 and 1-1/2” x .148 brite or mechanically galvanized. They are ICC-ES recognized under ER2126.

The Positive Placement® Metal Connector Nailer, Model PF150S-PP is available in select markets. To learn more about the product or to find a dealer, users can visit www.paslode.com or call 1-800-222-6990.
